**Innovative Software Solutions' Picas Product Adds Helpful New Features For Growers**

**GRAND RAPIDS, MI , September 25, 2008** - Picas Greenhouse Production Software has recently enhanced its program to allow users to sell combination kits and to have the ability to grade production based on Crop Status.

The combination kit option allows Picas customers to sell an item that is actually made up of multiple trays. With the setup of the kit, the Picas system will correctly take care of the inventory as well as accurately verify the trays that are needed for picking, sorting and packing on Picas shipping lines.

The ability to grade production based on Crop Status (Full Color, Cracking Color, Green, etc) has been added to Picas. This gives Picas finished customers the ability to not only sell what is available, but to further define the availability based on status. Picas' hand held data collection units have been enhanced to allow those in the greenhouse to collect the status information. Picas' availability exports have been enhanced to allow customers to break down the availability into the designated statuses. A new order entry option has also been added that allows the order entry personnel to enter an order based on selecting crops statuses that pertain to the customer whose order is being entered.

For additional information on Picas Features, contact Alison Cory or visit [www.picas-software.com](http://www.picas-software.com) .

**ABOUT INNOVATIVE SOFTWARE SOLUTIONS** - Innovative Software Solutions is the developer of Picas Greenhouse Production Software -- a fully integrated program used to manage everything from inventory, accounting, crop management and speculation, labor tracking, order entry, and data collection.
