Innovative Software Solutions' Picas Product Creates New Transplant and Sowing Line Functions

GRAND RAPIDS, MI, September 25, 2008 - Picas Greenhouse Production Software has recently created New Transplant and Sowing Line functions that allow Picas customers to have a workstation at the line so that they can easily work off of their sowing or transplanting plan, as well as have the system easily update the planted units into the inventory. These new lines allow for planning functions, comparison of actual planting to the plan, collection of planted numbers without the need for scanners, as well as eliminate the need for pre-printed reports that are run days ahead of the actual planting.

For additional information on Picas, contact Alison Cory or visit www.picas-software.com .

ABOUT INNOVATIVE SOFTWARE SOLUTIONS - Innovative Software Solutions is the developer of Picas Greenhouse Production Software -- a fully integrated program used to manage everything from inventory, accounting, crop management and speculation, labor tracking, order entry, and data collection.
